

# Fundamentals of Signals, Systems and Filtering

Brett Ninness

**©2000-2005, Brett Ninness, School of Electrical Engineering and Computer Science  
The University of Newcastle, Australia.**

# Contents

<b>1</b>	<b>Introduction</b>	<b>7</b>
<b>2</b>	<b>Signal Types and Operations</b>	<b>9</b>
2.1	Types of Signals . . . . .	9
2.1.1	Constant Signal . . . . .	10
2.1.2	Unit Step Signal . . . . .	10
2.1.3	Ramp Signal . . . . .	11
2.1.4	Pulse Signal . . . . .	12
2.1.5	(Dirac) Delta Function . . . . .	13
2.1.6	Periodic Signal . . . . .	16
2.1.7	Even and Odd Signals . . . . .	16
2.1.8	Exponential Signals . . . . .	17
2.1.9	Exponential Signals: Complex Representations . . . . .	17
2.2	Operations on Signals . . . . .	21
2.2.1	Magnitude Scaling . . . . .	21
2.2.2	Time Shifting (Translation) . . . . .	21
2.2.3	Time Reversal (Flipping) . . . . .	23
2.2.4	Time Scaling . . . . .	24
2.3	Concluding Summary . . . . .	25
2.4	Exercises . . . . .	27
2.A	Some Mathematical Background . . . . .	29
2.A.1	The limit of a function . . . . .	29
2.A.2	Continuous Functions . . . . .	29
<b>3</b>	<b>Modelling, Differential Equations and System Properties</b>	<b>31</b>
3.1	Electrical Circuit Modelling Examples . . . . .	31
3.2	Mechanical System Modelling Examples . . . . .	33
3.3	General Differential Equation Models . . . . .	39
3.3.1	Effect of constants . . . . .	39
3.4	Solution of First Order Differential Equations . . . . .	40
3.5	State Space Descriptions . . . . .	43
3.5.1	A 2nd Order Case . . . . .	43
3.5.2	The General Case . . . . .	45
3.5.3	State Transformations and Canonical Forms . . . . .	47
3.5.4	The presence of a ‘Feed-through’ term . . . . .	49
3.5.5	Direct State-Space Modelling . . . . .	51

3.6	Differential Equation Solution via State-Space Formulation . . . . .	52
3.7	Initial Conditions . . . . .	57
3.7.1	Observability . . . . .	59
3.7.2	Controllability . . . . .	61
3.8	Forced and Natural Response . . . . .	63
3.9	Impulse Response . . . . .	65
3.10	Invariance of Impulse Response . . . . .	67
3.11	Convolution . . . . .	68
3.11.1	Properties of Convolution . . . . .	69
3.11.2	Signal Convolution Examples . . . . .	74
3.12	System Properties . . . . .	81
3.12.1	Linearity/Non-linearity . . . . .	81
3.12.2	Causality . . . . .	82
3.12.3	Memory . . . . .	83
3.12.4	Time Invariance . . . . .	84
3.12.5	System Dimension . . . . .	84
3.12.6	Stability . . . . .	85
3.13	Concluding Summary . . . . .	89
3.14	Exercises . . . . .	92
3.A	Some Mathematical Background . . . . .	97
3.A.1	Fundamental Results of Calculus . . . . .	97
3.A.2	Eigen-analysis and Matrix Decomposition . . . . .	100
<b>4</b>	<b>Laplace Transform Analysis</b> . . . . .	<b>103</b>
4.1	Laplace Transform Definition and Interpretation . . . . .	103
4.2	Geometric Interpretation . . . . .	104
4.3	Computation of Laplace Transforms . . . . .	106
4.3.1	Dirac Delta $\delta(t)$ . . . . .	107
4.3.2	Step $\mathbf{1}(t)$ . . . . .	108
4.3.3	Ramp $r(t)$ . . . . .	108
4.3.4	Exponential $e^{\alpha t}$ . . . . .	109
4.3.5	Polynomial times Exponential $t^n e^{\alpha t}$ . . . . .	109
4.3.6	Cosine $\cos \omega t$ . . . . .	110
4.3.7	Sinusoid $\sin \omega t$ . . . . .	110
4.3.8	Exponentially Damped Cosine $e^{\alpha t} \cos \omega t$ and Sine $e^{\alpha t} \sin \omega t$ . . . . .	111
4.4	Properties of Laplace Transforms . . . . .	114
4.4.1	Linearity . . . . .	114
4.4.2	Time Shifting . . . . .	115
4.4.3	Time Scaling . . . . .	115
4.4.4	Convolution . . . . .	116
4.4.5	Differentiation . . . . .	117
4.4.6	Integration . . . . .	120
4.4.7	Transform of a Product . . . . .	121
4.4.8	Multiplication by $e^{\alpha t}$ . . . . .	121
4.4.9	Multiplication by $t$ . . . . .	122
4.4.10	Initial Value Theorem . . . . .	123
4.4.11	Final Value Theorem . . . . .	124

4.4.12	Summary of Properties . . . . .	125
4.5	Inversion of Laplace Transforms . . . . .	127
4.5.1	Contour Integral Formulation . . . . .	128
4.5.2	Evaluation by Residue Calculation . . . . .	129
4.5.3	The Case of Isolated Poles . . . . .	130
4.5.4	The Case of Repeated Poles . . . . .	133
4.5.5	Dealing with the Bi-proper Proper Case . . . . .	133
4.5.6	Causality of the Inverse Transform . . . . .	134
4.5.7	Dealing with Time Translations . . . . .	138
4.5.8	Inversion by Partial Fraction Expansion . . . . .	139
4.6	Differential Equation Solution by Laplace Transform Methods . . . . .	145
4.6.1	More on Initial Conditions . . . . .	151
4.7	The System Transfer Function . . . . .	156
4.8	Stability and the Transfer Function . . . . .	160
4.9	Transfer Function and Impulse Response Relationship . . . . .	161
4.10	Direct Transform Modelling of Electrical Circuits . . . . .	162
4.10.1	Kirchoff's Laws . . . . .	163
4.10.2	Parallel and Series Combinations . . . . .	164
4.10.3	Voltage Division . . . . .	165
4.10.4	Examples of Direct Laplace Transform Modelling . . . . .	165
4.11	Concluding Summary . . . . .	170
4.12	Exercises . . . . .	172
<b>5</b>	<b>Frequency Response, Fourier Analysis and Filter Design</b>	<b>177</b>
5.1	System Frequency Response and System Transfer function . . . . .	177
5.2	The Fourier Transform . . . . .	180
5.2.1	Inverse Fourier Transform . . . . .	184
5.2.2	Properties of the Fourier Transform . . . . .	188
5.3	Fourier Series . . . . .	200
5.3.1	Relationship between Fourier Series and the Fourier Transform . . . . .	205
5.3.2	Properties of Fourier Series Co-efficients . . . . .	208
5.4	Bode Frequency Response Diagrams . . . . .	215
5.4.1	Straight line approximation of Bode magnitude . . . . .	215
5.4.2	Straight Line Approximation of Bode Phase . . . . .	228
5.5	Filter Design . . . . .	240
5.5.1	Constraints on Achievable Performance . . . . .	240
5.5.2	Filter Types and Brick Wall Specification . . . . .	243
5.5.3	Butterworth Low-Pass Approximation . . . . .	248
5.5.4	Chebyshev Low-pass Approximation . . . . .	255
5.5.5	High-pass Filter Approximation . . . . .	260
5.5.6	Band-Pass and Band-Stop filter design . . . . .	263
5.6	Concluding Summary . . . . .	267
5.7	Exercises . . . . .	271
5.A	Mathematical Background . . . . .	276
5.A.1	Dirac Delta Interpretation of Integrated Exponential . . . . .	276
5.A.2	Spectral Factorisation for Chebyshev Filter . . . . .	277
5.A.3	The Law of Sines . . . . .	279

<b>6</b>	<b>Sampling, Reconstruction and the Discrete Time Fourier Transform</b>	<b>281</b>
6.1	Sampling . . . . .	281
6.2	Spectral relationship between a signal and its sampled version . . . . .	283
6.3	The Nyquist Sampling Criterion . . . . .	286
6.4	Reconstruction . . . . .	288
6.5	Aliasing . . . . .	292
6.6	The Discrete Time Fourier Transform . . . . .	296
6.7	The Inverse Discrete Time Fourier Transform . . . . .	300
6.8	Normalised Frequency . . . . .	302
6.9	Properties of the Discrete Time Fourier Transform . . . . .	303
6.9.1	Properties inherited from the continuous time Fourier Transform . . . . .	304
6.9.2	Further Properties . . . . .	306
6.10	The Discrete Fourier Transform (DFT) . . . . .	310
6.11	The Inverse Discrete Fourier Transform (IDFT) . . . . .	312
6.12	Relationship between DFT and DTFT . . . . .	313
6.13	Properties of the DFT . . . . .	314
6.13.1	Properties equivalent to those of DTFT . . . . .	314
6.13.2	Relationship of DFT to Fourier Transform - Data Windowing . . . . .	314
6.14	The Fast Fourier Transform (FFT) . . . . .	316
6.15	Exercises . . . . .	317
6.A	Mathematical Background . . . . .	319
6.A.1	Summation of a Geometric Series . . . . .	319
6.A.2	Inverse of $\Omega_N$ . . . . .	319
<b>7</b>	<b>Z Transforms</b>	<b>321</b>
7.1	Introduction . . . . .	321
7.2	Relationship between Z Transforms and Laplace Transforms . . . . .	321
7.3	Calculation of Z-Transforms . . . . .	325
7.4	Properties of Z-Transforms . . . . .	330
7.5	Inverting Z-Transforms Using Contour Integration . . . . .	340
